Distributed only to the parties and mediators of this dispute. Individual preferences are not disclosed.

## Executive summary

This document sets out a proposed resolution for dispute #5, “divorce”, between alberto95-1 and Fiorella. It concerns the division of 5 assets and was prepared by the CREA3 platform to help the parties — and any mediator involved — reach a fair outcome. It is a decision-support document and is explained in full in the sections that follow.

People rarely value the same things in the same way: one party may care far more about the family home, another about a particular asset. Rather than splitting every item down the middle, the platform asks each party privately how much each asset is worth to them, then gives each asset to the party who values it most. Because that can leave one party with more value than the other, a single **balancing amount** of money is set between them so that, measured against each party’s own sense of a fair share, both end up equally well off. This makes the division efficient (assets go where they are wanted most) and fair at the same time.

On the following pages you will find the parties to the dispute, a full timeline of what happened, how each party valued the assets, the proposed allocation, and a fairness summary showing the gap that emerged and the balancing amount that closes it. Each party’s individual ratings are kept confidential: only the resulting allocation and the differences in how the assets were valued are shown.

### Parties to the dispute

| Party       | Entitlement share | Status |
|-------------|-------------------|--------|
| alberto95-1 | 50.0%             | Joined |
| Fiorella    | 50.0%             | Joined |

### Timeline of the dispute

A full, chronological record of what happened in this dispute, drawn from the platform’s log. It is provided for context and does not reveal any party’s private valuations or preferences.

## Disputed Assets & Preferences

The parties do not necessarily place the same monetary value on each asset, and these **perceived values** — not any external estimate — are what the allocation is based on. The table below shows, for every asset, the value each party assigns to it. Where the two values differ (the “spread”), that difference is exactly what makes an equitable, rather than identical, division possible: each asset goes to the party who values it most, with a cash settlement restoring balance. Where the parties stated the same value, it is shown as **agreed**. The *reference* column is the figure entered when the asset was first registered, shown for context only — it is not a third valuation and is not used in the settlement.

| Asset      | alberto95-1 | Fiorella | Spread / status | Reference |
|------------|-------------|----------|-----------------|-----------|
| house      | €20,000     | €20,000  | agreed          | €20,000   |
| car        | €3,000      | €3,000   | agreed          | €3,000    |
| arts       | €4,000      | €4,000   | agreed          | €4,000    |
| bank       | €20,000     | €20,000  | agreed          | €20,000   |
| money_cash | €3,000      | €3,000   | agreed          | €3,000    |

Figures in green indicate the party who values that asset most. The “spread / status” column shows the difference between the two valuations, or “agreed” when the parties stated the same value, “✓ averaged” when they agreed during reconciliation to use the average, or “one-sided” when only one party declared the asset.

Valuation of each asset by each party:

## Proposed allocation

Each indivisible asset is awarded to the party who values it most. Divisible assets are split between the parties — the share each receives is shown. Individual preferences are not shown.

| Asset | Awarded to  | Awarded party's valuation | Estimated value |
|-------|-------------|---------------------------|-----------------|
| house | alberto95-1 | €20,000                   | €20,000         |

| Asset      | Awarded to                                               | Awarded party's valuation | Estimated value |
|------------|----------------------------------------------------------|---------------------------|-----------------|
| car        | <b>alberto95-1</b>                                       | €3,000                    | €3,000          |
| arts       | <b><i>split</i> — alberto95-1 50.0% · Fiorella 50.0%</b> | —                         | €4,000          |
| bank       | <b><i>split</i> — alberto95-1 7.5% · Fiorella 92.5%</b>  | —                         | €20,000         |
| money_cash | <b><i>split</i> — alberto95-1 50.0% · Fiorella 50.0%</b> | —                         | €3,000          |

## Allocation at a glance

The disputed assets by their estimated value. This shows the relative weight of each asset in the overall estate being divided.

Total estimated value of the disputed assets: **€50,000** across 5 asset(s).

## Fairness summary

Because the parties value the assets differently, the items each party receives are not worth the same to each of them. The table below shows, for each party, the total value of what they receive (in their own eyes) and the share that would be fair given their entitlement. The difference between the two is the **gap**. To close this gap, the proposal sets a single **balancing amount** between the parties — shown below — after which both parties are left equally well off relative to their fair share.

| Party       | Value received | Fair share | Gap | Balance |
|-------------|----------------|------------|-----|---------|
| alberto95-1 | €25,000        | €25,000    | —   | —       |
| Fiorella    | €25,000        | €25,000    | —   | —       |

**Value received** is what the assets awarded to a party are worth to that party. **Fair share** is the value that would match their entitlement. The **gap** is the difference between the two, and the **balance** is the single amount that closes it so the outcome is balanced for both.

How each party values the assets — alberto95-1 (left) vs. Fiorella (right):

## Summary and mediation proposal

---

This dispute concerns the division of 5 assets between alberto95-1 and Fiorella, with a total estimated value of €50,000. Each indivisible asset has been allocated to the party who values it most, and the divisible asset(s) (arts, bank, money\_cash) have been split between the parties. The allocation is already balanced and requires no balancing payment.

### Proposed path to resolution

1. Review this proposal independently. Each party is encouraged to read the allocation and the fairness summary and, where helpful, to seek independent legal advice.
2. Confirm or contest the asset valuations. The division relies on the estimated values recorded for each asset; if a party disputes a value, it should be raised before acceptance.
3. Agree on how the divisible asset(s) are to be split in practice (e.g. sale and division of proceeds, or transfer with a compensating payment).
4. Hold a mediation session. If the parties do not accept the proposal as it stands, a mediator can use it as a neutral, evidence-based starting point for negotiation. The platform can schedule a session once the parties choose a common time.
5. Formalize the agreement. Any final settlement should be put in writing and, where required, validated through the competent legal channels.

This proposal is a neutral, decision-support starting point. It is not binding and does not replace the parties' own agreement or a decision by a competent authority.

## Legal notice and intended use

**This document has no legal value.** It is an automatically generated decision-support document produced by the CREA3 platform to assist the parties and any mediator in reaching an equitable agreement. This document is a non-binding proposal generated to support negotiation; each party may accept or decline it in the platform.

The contents do not constitute legal advice, a legal opinion, a binding settlement, a court order, or any other legally enforceable instrument, and they do not create rights or obligations for any party. The allocation, valuations, and any balancing amount shown here are the output of an algorithm applied to the information the parties provided; they are indicative only, are not an order to pay, and may contain errors or omissions. Nothing in this document replaces independent legal advice from a qualified professional or the assessment of a competent court or authority.

Before relying on or acting upon this document, the parties should obtain appropriate legal advice and, where required, have any agreement formalized through the competent legal channels. The CREA3 consortium and the authors accept no liability for any use made of this document or for any decision taken on the basis of it.
